Voisus Solo

Stand-alone Software-only
Communications and
3D Sound Solution

ASTi expands its powerful Voisus® comms and sound product with Voisus Solo, a software-only application that installs on your desktop computer. No extra hardware required.

Perfect for small programs, single operators, or last-minute stand-up for training exercises, Voisus Solo provides instant comms at the point of need. Its intuitive interface enables administrators to configure the core communication requirements of any exercise. Quickly set up simulated radios, intercoms, and more, creating a comms environment that meets your Modeling, Simulation, and Training (MS&T) needs.

This low-cost, low-maintenance option interoperates with all ASTi products and DIS-based training applications. It doesn't just offer ready-to-go interfaces: use ASTi's software development kit (SDK) to develop custom UIs for almost any application. Integration is simple, making it easy to add high-fidelity radio simulations and comms to virtual reality (VR) devices and Next Gen training environments.
